A Class 1 Railroad Yard in Louisville Upgrades its RailComm Yard Control System

January 23rd, 2015 - A North American Class 1 railroad with a large switching yard located in Louisville, KY has chosen to upgrade their existing RailComm yard control system.

The upgrade includes the installation of new computer hardware infrastructure to run the Domain Operations Controller (DOC) system - RailComm's proprietary yard control software, as well as new I/O controllers to expand the number of switch machines that are being controlled by the RailComm system.

RailComm's DOC is a single, off-the-shelf system that seamlessly integrates control solutions. Designed to be completely extensible and expandable, DOC's modular architecture allows railroads to add, remove or enhance modules with no negative impact on performance or stability.

About RailComm

RailComm provides railroads with software-based solutions that are focused on train control and railroad management. Our state-of-the-art solutions automate an ever-expanding network of connected devices that generate real-time information which we then collect and analyze to coordinate and optimize the rail infrastructure. Our software solutions can be deployed on-site, or through an industry leading cloud/SaaS program. RailComm's solutions are installed on Class I railroads throughout North America, as well as on many Passenger Rail, Short Line, and Regional railroads. Our solutions have been instrumental in providing sustainable operating efficiencies and safety performance around the globe. To learn more, visit www.railcomm.com.
